## Deep Divisions over Debt Reduction Proposals

Public concern over the debt and deficit, already extensive, is only likely to increase as the so-called “fiscal cliff” approaches at the end of the year. Yet among a dozen specific options for reducing the debt and deficit, only two win majority approval from the public – raising taxes on annual incomes over \$250,000 (64% approve) and limiting corporate tax deductions (58%).

A new national survey by the Pew Research Center for the People & the Press, conducted Oct. 4-7, among 1,511 adults, including 1,201 registered voters, finds that cuts in education spending are particularly unpopular. Fully 75% disapprove of reducing federal education funding and 61% oppose cuts in funding for student loans.

---

### Majorities Oppose Cuts in Spending for Education, Science, Defense

PEW RESEARCH CENTER Oct. 4-7, 2012. Based on general public.

---

Majorities also oppose reducing military defense spending (56%) and funding for scientific research (54%). Opinion is divided over reducing funding to help low-income Americans (50% disapprove vs. 43% approve).

There also is resistance to making changes in Social Security and Medicare to reduce the debt and deficit: 57% oppose raising the amount Medicare recipients contribute to their health care, while 56% disapprove of gradually raising the Social Security retirement age. About as many disapprove (47%) as approve (49%) of reducing Medicare benefits for higher-income seniors.

And the public is split over limiting tax deductions for mortgage interest as a way to reduce the national debt: 47% approve and 44% disapprove of this proposal.

## Obama, Romney Voters Far Apart

The political divide over most of these proposals is substantial. The biggest differences between voters who favor Barack Obama and those who support Mitt Romney are over raising taxes on incomes over \$250,000 and reducing military defense spending. Fully 84% of registered voters who support Obama approve of raising taxes on annual incomes above \$250,000, compared with 41% of Romney voters.

Most Obama voters (58%) favor cutting military defense spending to reduce the debt and deficit; an even higher percentage of Romney voters (82%) oppose defense cuts.

While 62% of Obama supporters approve of raising taxes on investment income to reduce the debt and deficit, an identical percentage of Romney voters (62%) disapprove of increasing investment taxes.

### Huge Gaps Between Obama, Romney Voters over Taxes, Cuts in Defense, Aid to the Poor

		Obama Voters	Romney Voters	Diff
<i>In order to reduce the deficit and national debt...</i>		%	%	
<b>Wide differences</b>				
Raise income tax on income over \$250,000	Approve	84	41	<b>O+43</b>
	Disapprove	12	50	
Reduce military defense spending	Approve	58	16	<b>O+42</b>
	Disapprove	37	82	
Raise tax rate on investment income	Approve	62	32	<b>O+30</b>
	Disapprove	34	62	
Reduce funding to help lower-income Americans	Approve	29	58	<b>R+29</b>
	Disapprove	68	36	
<b>Significant differences</b>				
Reduce funding for college student loans	Approve	24	45	<b>R+21</b>
	Disapprove	75	50	
Reduce federal funding for scientific research	Approve	28	43	<b>R+15</b>
	Disapprove	69	46	
Reduce federal funding for education	Approve	16	31	<b>R+15</b>
	Disapprove	83	64	
Limit tax deductions for large corporations	Approve	69	57	<b>O+12</b>
	Disapprove	26	35	
<b>Modest/No differences</b>				
Limit home mortgage interest deduction	Approve	52	43	O+9
	Disapprove	43	49	
Gradually raise Social Security retirement age	Approve	43	50	R+7
	Disapprove	54	47	
Reduce Medicare for higher income seniors	Approve	50	53	R+3
	Disapprove	48	44	
Raise people's Medicare health care contributions	Approve	35	38	R+3
	Disapprove	60	55	

PEW RESEARCH CENTER Oct 4-7, 2012. Q35. Based on registered voters. Significant differences in **bold**.

Similarly, while 58% of Romney supporters favor cuts in federal programs that aid lower-income Americans, 68% of Obama voters oppose reductions in programs that aid the poor.

Among the 12 items tested, there is only one – limiting tax deductions for large corporations – that wins support from majorities of both Obama voters (69%) and Romney voters (57%).

## About the Survey

The analysis in this report is based on telephone interviews conducted October 4-7, 2012, among a national sample of 1,511 adults, 18 years of age or older, living in all 50 U.S. states and the District of Columbia (906 respondents were interviewed on a landline telephone, and 605 were interviewed on a cell phone, including 291 who had no landline telephone). Data collection was managed by Princeton Survey Research Associates International and conducted by interviewers at Princeton Data Source. A combination of landline and cell phone random digit dial samples were used; both samples were provided by Survey Sampling International. Interviews were conducted in English and Spanish. Respondents in the landline sample were selected by randomly asking for the youngest adult male or female who is now at home. Interviews in the cell sample were conducted with the person who answered the phone, if that person was an adult 18 years of age or older. For detailed information about our survey methodology, see <http://people-press.org/methodology/>

The combined landline and cell phone sample are weighted using an iterative technique that matches gender, age, education, race, Hispanic origin and nativity and region to parameters from the March 2011 Census Bureau's Current Population Survey and population density to parameters from the 2010 Decennial Census. The sample also is weighted to match current patterns of telephone status and relative usage of landline and cell phones (for those with both), based on extrapolations from the 2011 National Health Interview Survey. The weighting procedure also accounts for the fact that respondents with both landline and cell phones have a greater probability of being included in the combined sample and adjusts for household size among respondents with a landline phone. Sampling errors and statistical tests of significance take into account the effect of weighting. The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey:

<b>Group</b>	<b>Unweighted sample size</b>	<b>Plus or minus...</b>
Total	1,511	2.9 percentage points
Form 1	762	4.1 percentage points
Form 2	749	4.2 percentage points

Sample sizes and sampling errors for other subgroups are available upon request.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

## Sample Composition Analysis

The following table shows the profile of all adults interviewed, compared with population parameters from government surveys, as well as the profile of registered and likely voters interviewed.

Group	October 4-7, 2012 Political Weighted		
	Population Parameter	General Public	Registered Voters
<u>Gender</u>	%	%	%
Men	49	50	47
Women	51	50	53
<u>Age</u>			
18-24	13	13	10
25-34	18	17	13
35-44	17	17	17
45-54	19	19	20
55-64	16	16	19
65+	17	17	20
<u>Education</u>			
College grad +	28	30	36
Some college	28	28	30
High school or less	44	41	34
<u>Race/Ethnicity</u>			
White non-Hispanic	68	67	74
Black non-Hispanic	12	11	11
Hispanic	14	13	8
Other non-Hispanic	7	7	5
<u>Region</u>			
Northeast	18	19	18
Midwest	22	22	24
South	37	37	36
West	23	23	21
<u>Phone use</u>			
Landline only	7	7	6
Dual – landline and cell	58	59	65
Cell phone only	35	33	29
Unweighted N	--	1,511	1,201

Population parameters for all adults from the March 2011 Current Population Survey except phoneuse, which is based on projections from the 2011 National Health Interview Survey. All figures are based on weighted data. Don't know responses for the current survey are not shown. Whites, blacks and other race are non-Hispanic; Hispanics are of any race.
